Cabinets

DMAX Datacenter Server Cabinets are designed for providing Hot Aisle, Cold Aisle and its containment structure, which has been widely used in enterprise datacenters.

Design criterias serve to provide;

- Maximum performance for cooling of IP20 and IP55 solutions.
- Wide Range of cabinet sizes and ample variety accessories.
- Maximum inner space for servers
- Minimum environmental space requirement
- Professional cable management
- Heavy duty structure
- Compatibility with all vendors' servers
- High technical performance; grounding continuity
- Power/Energy management
- Controllable and reliable security by monitoring
- Aesthetic and professional view

DataCenter Solutions

Solutions for DataCenter

Cabinets

Door hinges are easily swapped from right to left in all single door enclosures.

Modular solution for extensive system accessories.

Glazed front door of sheet steel with 4mm. single-pane safety glass or perforated front door.

Two pair (1set at front / 1set at rear) of 19" mounting angels, adjustable in depth.

3-point locking mechanism in front and rear door. Half cylinder with master key, possible to use keypad, proximity etc...

Textured polyester coating provides excellent resistance to corrosion and chemical agents

The multi folded frames are closed structure, gives high level of stability.

Concealed 130° hinges, easily dismantled by pulling the pins.

Variable width and depth.

Bayable at all levels from inside and/or outside of cabinet.

Solutions for Data Center

Cabinets

NEW

Modular overhead cable management and cut-out zones for ventilation and cable access.

Bottom gland plate and top cable entries provide maximum versatility.

Foamed seal on the inside of all doors and panels ensures protection category IP55 to EN60529

Perforated single or double door opening at rear.

Extra depth bring more space for cable management and cooling.

Divided side panels for easy mounting

Housing for recessed vertical power strips and cable trays

Vertically arranged perforated mounting strips at rear for quick, easy attachment of cable supports, cable trunking, stiffeners and covers.

Ready for PE conductor connection on the enclosure and door with contact washers.

Adjustable levelling feets, and/or castor group and plinth.

Thanks to design structure and hinges providing of more inner cabinet space.

Options; special colour, special mounting plate, special sizes, glazed door.

The roof plate is secured with removable eyebolts and/or screws

Ample Variety for Accessories

U marking on 19" mounting angles.

Aesthetic coloured strip in front

Estap DMAX Server Cabinets offer professional and highly secured management of high density data and power cables. Separate cable inlet for data and energy cables, and separate overhead cable trays and dividers minimize the electromagnetic and physical interference.

Bottom cable entry is designed fully empty or with gland plates.

Cable rings can be used in all cable trays, vertical and horizontal C rails, framework of cabinet itself.

Simply the raceway for cables are created by fixing cable rings on all profiles in front and rear part of the cabinets.

By using cable rings, airflow is improved, installation time and cost is reduced. It creates space savings and flexibility inside the cabinet.

Overhead cable trays separate electrical and data cables.

Energy efficient and proper cooling for your datacenter

Estap Datacentre IT Cooling Solution ensures maximum IT availability at minimum running costs. The power usage effectiveness in the datacentres indicates that approximately 45% of the total incoming power is utilised by cooling and cooling related equipment.

By understanding the dynamics of the datacentre ecosystem, Estap Datacentre IT Cooling Solution offers the proper and energy efficient cooling with its wide product range such as water chilled sidecoolers, in-row coolers, heat removal units, cold aisle containment etc.

Solutions for Data Center IT Cooling

Cold Corridor

Hot Corridor

Solutions for Data Center

IT Cooling

NEW

In Row Cooling (in a cold/hot aisle containment)

To serve for cooling and/or enhancing the cooling capacity of a cold aisle containment, In Row Coolers are utilised. The water chilled solution increases the cooling efficiency and can easily cope with thermal loads upto 30 kW. These units are situated in-between the racks and provide proper airflow paths by preventing exhaust air

recirculating to IT equipment. The unit captures heat directly from the hot aisle and distributes cool air to the cold aisle. The heat rejection can be handled by an existing chilled water system. The modular solution serve scalable cooling capacity growth.

Benefits/Features

- Liquid cooling
- Enhanced cooling capacity
- Easy installation / maintenance
- Managed cooling with integration availability to any control systems

IT Cooling

Direct Rack Cooling (Side Cooler)

Benefits/Features

- Liquid cooling
- Total Heat Removal at Source
- Easy adaptation to any type of rack
- IP55 Closed system to prevent hot-cold air intervention at inside and from outside the rack
- High cooling capacity (upto 30 kW per rack)
- Easy installation/maintenance
- Managed cooling with integration availability to any control systems

With the advent of blades and high-density server infrastructures, high heat emissions at certain specific points in the racks create hot spots which are impossible to cool down either by any conventional systems or even by some specific applications like cold-aisle solutions etc. To prevent such formations of hot spots, direct rack cooling is the ideal

solution.

You can eliminate the heat at source and save a lot of energy. The heat rejection can be handled by an existing chilled water system. The modular solution serve scalable cooling capacity growth.

Twist Air (hot air removal)

Twist Air is an airflow enhancer module, extremely compact, it was developed to be installed on the rear side of server rack enclosure. Twist Air assure a proper airflow through the servers (up to 3000 m³/h) to avoid hot spots. Twist Air action avoid servers malfunctioning and shut down related to high temperature issue.

Twist Air is available in two different air flow configuration to be suitable for different datacenter arrangement, the air could be delivered on the rear side of the module for applications in hot and cold aisle arrangement, for datacenter with front to back arrangement the airflow is delivered to the top side, thus to avoid dangerous mixing of hot and cold air in front of the servers suction side in the next row, in this way efficiency and reliability of datacenter cooling system are strongly improved.

Real-time Monitoring and Management of Your Datacenter

EST RM 8164 Estap Remote Monitoring System

Estap Remote Monitoring System is a Linux based real-time monitoring and management solution for your datacenter to secure flawless operation with high resiliency. The solution is used for IP monitoring and remote management or as a video server in premises and site units, for example in server rooms or telecommunication stations, detached buildings.

With the user-friendly interface you can assign and locate sensors on map of certain object e.g. office, in order to develop a particular interface or to link user database with the data received from the monitoring system, to export data into CSV files. In addition, static and dynamic DNS for monitoring can be utilised. The monitoring system can also be used as a video-

server (via USB camera or web-camera) to transfer images and video-files onto remote servers.

It is possible to connect up to 8 analog, 40 digital sensors, 16 dry contacts and up to 4 relay devices. At connection up to 30 additional extension units, such as RS or BU the system may contain up to 1000 various sensors and devices.

SPECIFICATIONS

Installation: 19" rack

IP monitoring: Web, SNMP

Network protocols: Built-in HTTP server, SNMP agent, SMTP agent, manageable logic. Uses FTP link for updating current software version.

OS: Linux 2.6.23

Software: Built-in software for events processing.

Alert type: ESMTMP or SNMP traps

RS485 port: Connection of electricity meters with outputs RS485, CAN.

USB port: Web-camera. Type: most motion-jpeg cameras, image resolution: 320x240, video is sent to email up to 320 Kb in one file (10-20secs).

Analog ports: 8x 6P6C for connection of various sensors

Digital BUS: 2x 4P4C for connection of up to 20 digital sensors of humidity, voltage, motion or one access reader on each BUS

Dry contacts: 16

Relay outputs: 4 on/off x 220V*5A.

Net weight: 1kg

Dimensions: 440*44*105mm

EST RS 814 Estap Relay-Sensor Unit

Estap Relay-Sensor unit is the extension to the Estap Remote Monitoring System for remote premises (up to 1 km from master units) such as additional server rooms, detached buildings' datacenters. The unit enables connections up to 8 analog sensors and up to 4 electrical devices.

SPECIFICATION

Alert Type : ESMTTP, SNMP

Analog ports : 8x 6P6C for connection of various sensors

Relay outputs : 4 on/off x 220V*5A.

Software: Built-in software for events processing.

RS485 port : Connection of electricity meters with outputs RS485, CAN.

Net weight : 0,5kg

Dimensions: 140*44*90mm

Intelligent Power Distribution Units

Monitored & Switched IP PDUs for real-time powermanagement of your datacenter in a highly intelligent way!

Designed for high density, mission critical server applications, the Estap IP PDU range offers an excellent solution to scale electrical power budgets and fight against the inevitable rise of electrical energy costs in the datacenter business.

Monitored IP PDUs offer customers a choice of remotely monitoring the total current draw of the outlets via Ethernet. This, combined with state-of-the-art software such as Enterprise Manager, allows the user to aggregate the information from thousands of IP PDUs in one location.

All Monitored IP PDUs also include the EasyRead Digital LED Ammeter for easy start-

up and provisioning of servers.

The Estap Managed IP PDUs provide reliable power distribution and monitoring of individual outlets to datacenters, for both standart and Blade servers. Powered by the Revelation technology platform, the Estap Managed IP PDU line combines the industry's leading high-density power solutions with breakthrough technology. Employing a server-grade microprocessor, this product has unprecedented management and monitoring capabilities, so the user can even monitor the power down to the individual outlet level! User-definable sequencing of outlets and time delays permit controlled remote boot-

up of servers. 256-bit encryption ensures secure communication and IPMI and SMASH CLI capability provides harmonised user access to computer hardware and IP PDUs. Estap IP PDUs are available in both vertical (OU) and 19i horizontal rack mountings. The multi-channel Ammeter allows the monitoring of current on input, branch circuit and on each outlet (by the Managed PDU) to ensure accurate load balancing and maximum cabinet use. Individual outlet monitoring allows real time efficiency evaluations of both hardware and software.

Features	Benefits	Managed PDU	Monitored PDU
Switch individual outlets on/off remotely	Enables remote "lights out" datacentre operation	✓	
Lock outlets using software	Prevents unauthorized powering of servers	✓	
Create virtual groups of outlets	Eases management of similar types of equipment and multicorded servers	✓	
Comprehensive monitoring at the outlet level of volts, amps, watts, kVA	Enables better power management and promotes efficiency	✓	
User definable sequencing (outlet order and time delay)	Permits controlled boot-up based on equipment power draw	✓	
Flash upgradeable firmware	Receive and update to new software easily	✓	
Environmental monitoring	Monitor environmental variables and power in one unit	✓	
SNMP traps and email functionality	Various notification options	✓	
IPMI2 and SMASH compatible	Harmonize user access to computer hardware and PDU	✓	
256 bit AES encryption (HTTPS, SSL, SSH, SSH2 and built in firewall)	Provides secure communication platform	✓	
Ethernet port	Remote Monitoring using Ethernet	✓	✓
RS232 Serial Port	Remotely monitoring using serial connection; Aggregate thousands of PDUs using Eaton's Powerware software solutions	✓	✓
Large EasyRead Digital ammeter	Large local LED for aiding provisioning of servers	✓	✓
Single and dual circuit chassis design	Options for high density environments	✓	✓
Circuit Breaker branch protection option (not fuses)	Return to service quickly; safer	✓	✓
Worldwide outlet and input connectors	Flexible configuration options	✓	✓
Fully earth bonded	Safer design	✓	✓
Extruded aluminium chassis	High structural strength	✓	✓
Fully Shrouded Circuit Breakers and Switches	Prevents accidental operation	✓	✓
Outlets isolated from circuit board	Extends life of unit	✓	✓
Optional tie bar	Secure plug retention		✓

Energy Analyser Display Unit (single phase, kW-meter, ammeter, voltmeter, frequency meter) integrable with the above Basic PDUs

ESTAP® USB-PS/2 Combo-8/16 port KVM switch with OSD

The high quality KVM switch is ideal for using in small to middle sized server rooms and provides direct connection to many servers.

- Controls up to eight PCs with one PS/2- or USBkeyboard, one PS/2- or USB-mouse and one monitor
- Simple installation - no additional software needed
- PC-choice over push-buttons, Hot-Key or OSD (On Screen Display)
- Excellent video quality - up to 2048 x 1536 pixels at 85Hz
- Supports DDC, DDC2
- Hot Plug and Play
- Emulates a keyboard on each PC to allow your computers to boot normally without a keyboard error
- Autoscan (5 to 250 sec.)
- incl. external power supply unit DC 5V 2A
- incl. 19"-Rack mounted iron panel with screw (DC-15002 => also separately available)
